TITLE: Urn vacuum-packing device

----- KWIC -----

Basic Abstract Text - ABTX (1):

NOVELTY - An urn vacuum-packing device is provided to prevent moisture or oxygen contained in the air from remaining in the urn by sealing up a lid of the urn in a vacuum state to keep ashes generated after cremation in the urn and accordingly prevent ashes from being degenerated and polluted.

Basic Abstract Text - ABTX (2):

DETAILED DESCRIPTION - An urn vacuum-packing device is composed of a vacuum chamber(10) capable of being opened and closed, a vacuum pump(20) communicated with the inside of the vacuum chamber and an exhaust pipe(51), an exhaust valve(50) mounted to the exhaust pipe, a transfer device(30) installing and transferring a lid(62) of an urn(60), a placing groove(11) arranging the urn at a fixed position, and an intake valve(40) flowing-in air from the atmosphere.

Derwent Accession Number - NRAN (1):
